IN ONE FLASK

Shungite is a carbonaceous rock, possessing unique properties thanks to fullerene molecules, which have different revitalizing actions. Fullerene is not toxic and do not suppress healthy cells. In the contrary, it helps to the performance process of all biological structures of organism. In water fullerene's all healing properties sharply increases. Scientists have already determined that fullerene is the most powerful and long-acting antioxidant. It stimulates cellular respiration, slows skin aging process down, moisturizes the skin, enhances the regenerative process of tissues, removes inflammation and irritation, and improves skin's common immune system.

For all skin types

No petrochemistry

Contains shungite mineral

Natural product

G-TIME CORPORATION is a Kazakhstani commercial and industrial company established in May of 2012 and it has already earned a reputation in more than 80 countries worldwide. In 2015, together with scientists and academicians of KazNU after al-Farabi (Kazakh National University) built a factory LLP "Shugla Shungite" which produces domestic cosmetic products Shungite beauty line. The main production feature is that all our cosmetic line is made of natural mineral Shungite as well as other natural components. Shungite has rare healing qualities. Today more than 40 products are produced by our factory, including: face, hand and foot creams, cosmetic balms, shampoos, shower gels, scrubs, face masks, body lotion, soap, prophylactic creams and many others.

Quality, health and beauty – are the main criteria of our natural cosmetics developed under a tactful guidance of scientists and highly qualified specialists.

Thanks to a successfully established marketing plan all of our products are distributed not only throughout Kazakhstan, but also to neighboring and far-abroad countries.

All products are produced following an accurate technology provided by chemists of LLP "Shugla Shungite" factory. New product development undergoes a laboratory check and only after that is sent to a mass production and sale.

For the preparation of cosmetic products, the followings are used: highly mineralized water, which undergoes several degrees of purification and then is brewed in shungite brought from Eastern Kazakhstan and the mineral itself.

Let us take care of your skin!
